SKILLS

- HTML/CSS/Javascript
- SCSS/ Bootstrap/ Tailwind
- **React Js/Redux/Next Js**
- Git & GitHub
- Node Js / Express JS
- SQL/Mongo DB

PROJECTS

Contribute to a project for film production company in USA

- The main concept of the project is that the writer can upload the film script and the website is responsible for dividing the script (using AI) into scenes and arrange them into a table
- My role was to receive the divided script from an API arrange it in a table and provide a UI for the user so he can rearrange the table by drag & drop functionality adding new scenes, modifying them deleting scenes, etc...
- I have built it using: ReactJS, NextJS.

React JS E-commerce Website “CONFIE” ([GitHub](#))

- I Built it with React Js and Firebase, it has a “CRUD” control panel that let the admin add, read, update or delete data for the store and it shows sales details, also it has a registration system.
- Customers can sign up and start browsing for suitable products by filtering them depending on the category and sorting them depending on the price.
- They can add chosen products to a shopping cart and purchase them which will update the admin’s control panel by adding the purchased products to the sales list and modifying their quantities in the products list
- You can view a demo for this project on this [link](#)

Vanilla JavaScript E-commerce website “MA FASHION” ([GitHub](#))

- It’s an E-commerce responsive website suitable for all devices sizes, it has a cool UI
- Users can filter products depending on the category or sort them depending on the price and add them to a shopping cart
- It has a sign-up form that validates data using Regex
- You can view a demo for this project on this [link](#)

EDUCATION

University of Aleppo
Bachelor of Mechatronics Engineering

Aleppo, Syria
May 2025
